

I request that the commission not approve or allow any further efforts to go forward regarding the so-called "BPL" (Broadband over Power Lines). As an active Amateur Radio Operator (W3AHR), I feel that the proper amount and quality of testing has not been done to prevent what appears to be massive interference to the existing amateur radio bands. In light of the testing performed by the ARRL, it would seem that such is the case. Please at least defer any decision on this matter until proper, impartial testing can take place.
